Notes to Sources and Methodology

of the Published Data

This publication sets out a Fundamentals overview of living standards in the Czech Republic in the years 1993 – 2017 (for the duration of the independent Czech Republic).

The selected and available **data of the Czech Statistical Office, the Czech National Bank and the Ministry of Labour and Social Affairs** were used for the calculations (predominantly the author's own ones).

The development and structure of households' incomes are documented mainly by data from national version of the EU-SILC (the European Union - Statistics on Income and Living Conditions) surveyed every year since 2005 (with the income reference period for the previous year) by the Czech Statistical Office (CZSO). **The purpose of the survey is to obtain representative data on income of particular types of households and the related indicators of living conditions** (housing, equipment, economic situation, and income distribution). The time series of household income are recalculated from annual data to monthly averages per one household member. All types of incomes documented in the survey were taken as net or gross, of which the respective gross or net amounts were estimated according to the current tax system. The main national indicator of net households' income was determined from net income per individuals and households as set out in Table 1 and as a summary in Table 2. Furthermore, the second table shows a more detailed breakdown of gross incomes (income from employment, income from self-employment, social income and other incomes).

The basic informative overview concerning the development of households' income, expenditures and savings (at a macro level) is provided in Table 3 - source data were taken from the National Accounts (CZSO).

The characteristics of wage development were based on the CZSO data. Since January 1st, 2009, **the main emphasis in publishing an average wage has been put on**

the so-called Full-Time Equivalent of Employees (formerly on natural persons) within the national economy (taking into account whether work was performed full-time or part-time). In the data processing, the CZSO applies the methods of estimating nonresponse and estimations of the non-surveyed part of population while using administrative data sources (i.e. the average gross monthly wage for the whole national economy includes data for all employees). **Another important methodological change implemented by the CZSO was the processing and publication of data on average wage according to the Classification of Economic Activities CZ-NACE** (national version of NACE Rev. 2), which replaced the previously used OKEČ Classification (national version of NACE Rev. 1.1). Data on the average gross monthly wage, taking into account the changes in the survey methodology described above, have been available only since 2000. By 2010, data for individual regions were acquired by the company method – according to the economic entity's registered office; therefore, they do not necessarily characterize the situation in the given region fully. **Since 2011, the data in the territorial classification have been processed according to the current workplace of the employees.** The monitoring of average wages separately for the business and non-business sphere was last published in 2016 and is no longer available since the reference year 2017. Some differences between the data reported in this publication and the data reported by the CZSO stem from the different methodology used in compiling time series and in reporting for the current period.

The nominal development of old-age pensions is characterized by MLSA data; the official indices of living costs of pensioners households from the CZSO calculations were used for calculations of their real levels.

The Household Budget Survey (further referred to as HBS) constitutes a comprehensive (and irreplaceable) data source that continuously **characterizes the area of private households' economic management and provides information on the amount of their expenditures and the structure of consumption.** Information on differences in households' consumption classified according to different aspects or information on the influence of different factors (e.g. price movements, market situation) on the structure of expenditures and consumption habits of households cannot be obtained from other sources.

The HBS reporting sample of households was selected by a deliberate quota sampling by 2015, and during the whole surveyed period was carried out on the sample of approximately 3,000 households, which by their composition corresponded to the structure of households in the Czech Republic according to the status of the head of household, the

number of children (or other family members) and the amount of net monetary income per person. Various statistical surveys (especially Microcensus) were formerly used to determine the quotas, since 2006 it has been mostly the Living Conditions survey (implemented as a national EU-SILC survey module). Until 2010 there was still the so-called supplementary sample consisting of about 400 families with children whose income was slightly above the subsistence level. This sample provided representative data for families with children with minimum income. Over the years, the composition of the HBS reporting sample has been operationally modified to always affect a shift in basic attributes of households (their composition, economic activity, income level, etc.) – Such changes may, to a certain extent, have been reflected in relative indicators, though they did not have a significant effect on basic (longer term) tendencies.

Following the forthcoming regulation on the Integrated European Social Statistics (IESS), which presumes the integration of social surveys in households and random sample surveys, the CZSO has undertaken a reform of the HBS. **In 2016, the current survey method (through quota sampling) was carried out for the last time on the reduced sample of households, which allowed processing representative outputs only to a limited extent and details.** The reporting sample of 1.6 thousands of households was selected so that its composition according to selected features corresponds to the structure of households in the Czech Republic. The results of the Living Conditions survey served as a support for setting the quotas.

Therefore, the published data from the HBS for 2016 were modified with regard to the possibilities of the reduced sample and the details of the published items were significantly reduced. From the income data, the only information retained in the CZSO were the data on the total net monetary income. Balance sheet items, detailed data on natural and total consumption, and natural expenditures were also not published. The expenditure items only include data on consumption expenditures. **Expenditures which are not classified as consumption in 2016 as well as total gross and net amounts are not published.** For that reason, the published details of the selected expenditure items on the total items were limited in two tables to only 12 basic COICOP sections.

As a result of such significant changes in the HBS, there are no tables reflecting the net money income and the amount of deposits of selected types of households in the current yearbook series. The tables containing data on the total monetary expenditure of selected household types and the structure of their consumption expenses were retained – see Tables 11 to 13.

To classify the so-called consumption expenditures, a classification CZ-COICOP has been used since 1999, i.e. "Classification of Individual Consumption by Purpose", which was created as the Czech version of the COICOP (Classification of Individual Consumption by Purpose) international standard. Household consumption extensions are organized into 12 divisions according to this classification. More generally, the set item "Other goods and services" includes, in particular, personal care products and services, personal supplements, all kinds of insurance, and administrative and other charges. Expenses not included in the CZ-COICOP (e.g. investment expenses for construction or more precisely reconstruction of a house or a flat, expenses related to the care for utility garden and livestock, etc.) were by 2015 allocated to a separate section "Non-Consumption Expenditure". For the year 2016, data in this section are no longer published.

Nominal net monetary expenses are informatively stated in the publication according to the status of a head of household for the period between 1993 and 2000 (Table 11). The consumption expenses data for individual types of households have been monitored since 2000 and form separate time series (Table 12). Since 2006, the CZSO has no longer separately monitored farmer's households in HBS; data for the previous years are, however, kept in the publication for the sake of comparison, the same has also been true for families with children with minimum income since 2011. **All data based on the HBS (unless stated otherwise) are presented as an average per one household member. If it is necessary to obtain an average for the whole household, the overview of an average number of members per household can be used** (see the table at the end of this text).

Last HBS (2017) was conducted already in a framework of a new model that used the random sample method. The data is still under a detailed analytical review. The shape and scope of the published outputs including the possibilities of comparability within time series are being considered. **As a result, the release of the publication for 2017 and the HBS data provision were postponed to the next year.** Therefore, the time series data in the Tables 12 and 13 terminates in 2016.

The Consumer Price Indices (costs of living) are aligned with the price statistics of the countries within the European Union. The aggregate consumer price indices (costs of living) reported by the CZSO for individual years have remained valid. The development line of price movements in the basic consumption basket groups is comparable. **Since 2009, the aggregate cost of the living index has been reported only for households in total, households of pensioners and households in the capital of Prague.**

The development of price inflation is complemented by the development of the Harmonized Index of Consumer Prices (HICP). Comparison with the EU countries is based on a consumption basket adjusted to suit these needs, and the data presented for the Czech Republic, therefore, differ from other data characterizing the inflation price in the overview. **There are some differences between the consumption basket structure of the national consumer price index of the Czech Republic and the structure of the HICP consumption basket.** HICP includes revenues from foreigners' purchases in the Czech Republic but does not include imputed rents, as opposed to the national consumer price index, where the foreigners' purchases are not included but the imputed rent is.

The total volume of household deposits and loans in the Czech Republic is based on the Czech National Bank (commercial banks data) statistics, which is published in the ARAD time series database. **The aggregate of household deposits is further divided in more detail to demand deposits and term deposits.** The time series of **household bank loans focuses more closely on the development of total housing loans.**

Internationally comparable data on the development of population living below the poverty line (in %) between 2005 and 2016 are shown in Table 24. The at-risk-of-poverty rate is the share of people with an equivalised disposable income (after social transfer) below the at-risk-of-poverty threshold, which is set at 60 % of the national median equivalised disposable income after social transfers. The source data was obtained from the results of the EU-SILC 2005 – 2016 surveys published by Eurostat.

All data for 2017 should be considered as provisional. Data from national accounts are provisional for all the years reported.

The aim of the publication is in particular to show the long-term development trends, whereas in some cases (household budget survey, some wage developments etc.) it was not possible to achieve full methodological and contents comparability of data (where changes of methodology or more precisely contents were of a significant nature, the shorter time series are included, or alternatively divided into methodically comparable sections).

Note: Data in the publication marked "" mean that the data were not statistically surveyed in the given year.

The publication contains data valid as of July 31st, 2018.

¹⁾ Wages and salaries; social contributions from employers.

²⁾ Operational surplus (created by production activities) and mixed income, i.e. the remuneration for work done by the owner or his family members; this is marked as „mixed income“, because it cannot be separated from the entrepreneurial profit of the owner.

³⁾ E.g. interests, dividends, sharecropper.

⁴⁾ E.g. income tax from employment, property, entrepreneurship, lottery wins and bets.

⁵⁾ The difference between current revenues and current expenditures.

⁶⁾ The ratio of gross savings to disposable income of households.

- real wage	*	103.7	105.6	104.9	103.6	102.8	104.2	104.5	102.2

Processed from the data of CZSO	2009	2010	2011	2012	2013	2014	2015	2016	2017
Monthly nominal wage in CZK	23 104	23 733	24 447	25 078	24 986	25 742	26 538	27 696	*
Indicies in % - nominal wage	103.0	102.7	103.0	102.6	99.6	103.0	103.1	104.4	*
- consumer prices (CPI)	101.0	101.5	101.9	103.3	101.4	100.4	100.3	100.7	*
- real wage	102.0	101.2	101.1	99.3	98.2	102.6	102.8	103.7	*

Note: The spheres are delimited using the ESA 1995 methodology for the national accounts compilation. Starting in 2012 reporting units were moved in an administrative manner in between the business sphere and the non-business one. More accurate classification was performed on the basis of the so-called 50% criterion (originating from the share of financial resources intended for the cover of operational costs). The time series of average wages is methodologically comparable since 2010, because the data for 2010 and 2011 were recalculated according to the same methodology. This classification is published for the last time for 2016 and it is not available since 2017.

c) *Non-business Sphere*

Processed from the data of CZSO	2000	2001	2002	2003	2004	2005	2006	2007	2008
