Notes to Sources and Methodology

of the Published Data

This publication sets out a Fundamentals overview of the living standard in the Czech Republic in the years 1993 – 2016 (for the duration of the independent Czech Republic).

The selected and available **data of the Czech Statistical Office, the Czech National Bank and the Ministry of Labour and Social Affairs** were used for the calculations (predominantly the author's own ones).

The development and structure of household incomes are documented mainly by data from national version of the EU-SILC (the European Union - Statistics on Income and Living Conditions) surveyed every year since 2005 (with the income reference period for previous year) by the Czech Statistical Office (CZSO). **The purpose of the survey is to obtain representative data on income of particular types of households and the related living conditions' indicators** (housing, equipment, economic situation, income distribution). The time series of household income are recalculated from annual data to monthly averages per one household member. From individual net income per individuals and households, the main national indicator of net household income was determined as set out in Table 1 and as a summary in Table 2. The second table also shows a more detailed breakdown expressed as gross income (income from employment, income from self-employment, social income and other income).

The basic informative overview concerning the development of households' income, expenditures and savings (at macro level) is provided in Table 3 - source data were taken from the National Accounts (CZSO).

The characteristics of wage development were based on the CZSO data. Since 1 January 2009, **the main emphasis in publishing an average wage has been put on the so-called Full-Time Equivalent of Employees** (formerly natural persons) in the whole national economy (taking into account whether work was performed full-time or part-time).

In data processing, the CZSO applies the methods of estimating nonresponse and estimates for non-surveyed part of the population while using administrative data sources (i.e. an average gross monthly wage for the whole national economy includes data for all employees). **Another important methodological change implemented by the CZSO was the processing and publication of data on average wage according to the Classification of Economic Activities CZ-NACE** (national version of NACE Rev. 2), which replaced the previously used OKEČ Classification (national version of NACE Rev. 1.1). Data on average gross monthly wage taking into account the changes in the survey methodology described above has been available only since 2000. By 2010, data for individual regions was acquired by a company method – according to an economic entity’s registered office; therefore, it does not have to fully characterize the situation in the given region. **Since 2011, data in the territorial classification has been processed according to the location of employees’ current workplace.** Some differences between the data reported in this publication and the data reported by the CZSO stem from the different methodology used in compiling time series and in reporting for the current period.

The nominal development of old-age pensions is characterized by MLSA data; the official indices of living costs of pensioners households from the CZSO calculations were used for calculations of their real levels.

The Household Budget Survey (further referred to as HBS) constitutes a comprehensive (and irreplaceable) data source that continuously **characterizes the area of private households economic management and provides information on the amount of their expenditures and the structure of consumption.** Information on differences in households consumption classified according to different aspects or on the influence of different factors (e.g. price movements, market situation) on the structure of expenditures and consumption habits of households cannot be obtained from other sources.

The HBS reporting set of households was selected by deliberate quota by 2015, and in the whole surveyed period it was carried out on the sample of approximately 3,000 households, which by their composition corresponded to the structure of households in the Czech Republic according to the status of the head of household, the number of children (or other family members) and the amount of net monetary income per person. Various statistical surveys (especially Microcensus) were used to determine quotas and since 2006 it has been mostly the Living Conditions survey (implemented as a national EU-SILC survey module). By 2010, the so-called supplementary set existed of about 400 families with children whose income was slightly above the subsistence level. This set provided

representative data for families with children with minimum income. Over the years, the composition of the HBS reporting set has been operationally modified to always affect a shift in basic attributes of households (their composition, economic activity, income level, etc.) – these changes may, to a certain extent, have been reflected in relative indicators, though did not have a significant effect on basic (longer term) tendencies.

Following the forthcoming regulation on Integrated European Social Statistics (IESS), which presumes the integration of social surveys in households and random sample surveys, the CZSO has undertaken a reform of the HBS survey. **In 2016, the current survey method (through quota selection) was carried out for the last time on the reduced sample of households, which allowed processing representative outputs only in a limited extent and details.** Reporting set of 1.6 thousands of households was selected so that its composition according to selected features corresponds to the structure of households in the Czech Republic. The results of the Living Conditions survey served as a support for setting of the quotas.

Therefore, the published data from the HBS for 2016 was modified with regard to the possibilities of the reduced sample and the details of the published items were significantly reduced. From the income data, the only information on the total net monetary income was retained in the CZSO data. Balance sheet items, detailed data on natural and total consumption, and natural expenditures were also not published. Expenditure items only include data on consumption expenditures. **Expenditures not classified as consumption in 2016, as well as total gross and net amounts are not published.** For that reason, the published details of the selected expenditure items on the total items were limited in two tables to only 12 basic COICOP sections.

As a result of such significant changes in the HBS, there are no tables reflecting the net money income and the amount of deposits of selected types of households in the current yearbook series. The tables containing data on the total monetary expenditure of selected household types and the structure of their consumption expenses were retained – see Tables 11 to 13.

To classify the so-called consumption expenditures, classification CZ-COICOP has been used since 1999, i.e. “Classification of Individual Consumption by Purpose”, which was created as the Czech version of the COICOP (Classification of Individual Consumption by Purpose) international standard. Household consumption extensions are organized into 12 divisions according to this classification. More generally, the set item “Other goods and

services” includes, in particular, personal care products and services, personal supplements, all kinds of insurance, and administrative and other charges. Expenses not included in the CZ-COICOP (e.g. investment expenses for construction or more precisely reconstruction of a house or flat, expenses related to the care for utility garden and livestock, etc.) were by 2015 allocated to a separate section “Non-Consumption Expenditure”. For the year 2016, data in this section are no longer published.

Nominal net monetary expenses are informatively stated in the publication according to the status of a head of household for the period between 1993 and 2000 (Table 11). The consumption expenses data for individual types of households have been monitored since 2000 and forms a separate time series (Table 12). Since 2006, the CZSO has no longer separately monitored farmers households in HBS; data for previous years are, however, left in the publication for comparison, the same has also been true for families with children and minimum income since 2011. **All data based on household budget survey (unless stated otherwise) are presented as an average per household member. If it is necessary to obtain an average for the whole household, the overview of an average number of members per household can be used** (see the table at the end of this text).

Consumer Price Indices (costs of living) **are aligned with the price statistics of the countries of the European Union.** The aggregate consumer price indices (costs of living) reported by the CZSO for individual years have remained valid. The development line of price movements in the basic consumption basket groups is comparable. **Since 2009, the aggregate cost of living index has been reported only for households in total, households of pensioners and households in the capital of Prague.**

The development of price inflation is complemented by the development of the Harmonized Index of Consumer Prices (HICP). Comparison with the EU countries is based on a consumption basket adjusted to suit these needs, and the data presented for the Czech Republic, therefore, differs from other data characterizing the inflation price in the overview. **There are some differences between the consumption basket structure of the national consumer price index of the Czech Republic and the structure of the HICP consumption basket.** HICP includes revenues from foreigners’ purchases in the Czech Republic but does not includes imputed rents, as opposed to the national consumer price index, where the foreigners’ purchases are not included but the imputed rent is.

The total volume of household deposits and loans in the Czech Republic is based on the Czech National Bank (commercial banks data) statistics, which is published in the ARAD time series database. **The aggregate of household deposits is further divided in more detail to demand deposits and term deposits.** The time series of **household bank loans focuses more closely on the development of total housing loans.**

Internationally comparable data on the development of population living below the poverty line (in %) between 2005 and 2015 are shown in Table 24. The at-risk-of-poverty rate is the share of people with an equivalised disposable income (after social transfer) below the at-risk-of-poverty threshold, which is set at 60 % of the national median equivalised disposable income after social transfers. The source data was obtained from the results of the EU-SILC 2005 – 2015 surveys published by Eurostat.

All data for 2016 should be considered provisional. Data from national accounts are provisional for all the years reported.

The aim of the publication is in particular to show long-term development trends, whereas in some cases (household budget survey, some wage developments etc.) it was not possible to achieve full methodological and contents comparability of data (where changes of methodology or more precisely contents were of a significant nature, shorter time series are included, or alternatively divided into methodically comparable sections).

Note: Data in the publication marked "" means that the data was not statistically surveyed in the given year.

The publication contains data valid as of 31 July 2017.

¹⁾ Wages and salaries: social contributions from employers.

²⁾ Operational surplus (created by production activities) and mixed income, i.e. the remuneration for work done by the owner or his family members; this is marked as „mixed income“, because it cannot be separated from the entrepreneurial profit of the owner.

³⁾ E.g. interests, dividends, sharecropper.

⁴⁾ E.g. income tax from employment, property, entrepreneurship, lottery wins and bets.

⁵⁾ The difference between current revenues and current expenditures.

⁶⁾ The ratio of gross savings to disposable income of households.

| - consumer prices (CPI) | 101.0 | 101.5 | 101.9 | 103.3 | 101.4 | 100.4 | 100.3 | 100.7 |
| - real wage | 102.0 | 101.2 | 101.1 | 99.3 | 98.2 | 102.6 | 102.8 | 102.8 |

Note: The spheres are delimited using the ESA 1995 methodology for the national accounts compilation. Starting in 2012 reporting units were moved in an administrative manner in between the business sphere and the non-business one. More accurate classification was performed on the basis of the so-called 50% criterion (originating from the share of financial resources intended for the cover of operational costs). The time series of average wages is methodologically comparable since 2010, because the data for 2010 and 2011 were recalculated according to the same methodology. This classification is published for the last time for 2016 and it will not be available since 2017.

| - consumer prices (CPI) | * | 104.7 | 101.8 | 100.1 | 102.8 | 101.9 | 102.5 | 102.8 | 106.3 |
| - real wage | * | 103.3 | 105.4 | 105.1 | 103.7 | 102.8 | 104.1 | 104.5 | 102.3 |

| Processed from the data of CZSO | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|------------------------------------|--------|--------|--------|--------|--------|--------|--------|--------|
| Monthly nominal wage in CZK | 22 501 | 23 120 | 23 764 | 24 428 | 24 352 | 25 065 | 25 676 | 26 728 |
| Indicies in % - nominal wage | 102.9 | 102.8 | 102.8 | 102.8 | 99.7 | 102.9 | 102.4 | 104.1 |
| - consumer prices (CPI) | 101.0 | 101.5 | 101.9 | 103.3 | 101.4 | 100.4 | 100.3 | 100.7 |
| - real wage | 101.9 | 101.3 | 100.9 | 99.5 | 98.3 | 102.5 | 102.1 | 103.4 |

Note: The spheres are delimited using the ESA 1995 methodology for the national accounts compilation. Starting in 2012 reporting units were moved in an administrative manner in between the business sphere and the non-business one. More accurate classification was performed on the basis of the so-called 50% criterion (originating from the share of financial resources intended for the cover of operational costs). The time series of average wages is methodologically comparable since 2010, because the data for 2010 and 2011 were recalculated according to the same methodology. This classification is published for the last time for 2016 and it will not be available since 2017.
