1. Introduction

The Czech Republic, as an independent state, was established on January 1, 1993 by a split of the former Czech and Slovak Federal Republic. With an area of 78 866 sq. km, population of 10,5 mil. and population density of 133 inhabitants per sq. km, it could be classed as a small Central European state.

The area of the state is administratively structured into 76 territorial entities - (LAU 1 - districts with approximately 120 thous. inhabitants on average) and the capital Prague (NUTS 3 and LAU 1 at the same time) with 1 243 mil. inhabitants at the end of 2013. Concerning territorial performance of state administration the district offices were abolished in 2003, function of state administration, which these authorities had exercised until that time, passed largely on municipal and regional offices. The local government is performed on the level of individual municipalities (ca 6,3 thous. municipalities) and from January 1, 2000 also on the level of 14 regions (it corresponds with the classification NUTS 3) that represent higher self-government units. They were gradually involved in some functions formerly provided at the level of district offices or ministries.

The economic and social transformation proceeding after 1989 had an impact on certain demographic characteristics of the population. The most significant aspects are postponement of a family establishment and birth of children. Number of born children had dropped constantly. Since 1993 the natural population increment has turned into a decrement. However, in 2006 - 2012 number of live-born children has exceeded number of the deaths. In 2013 there were 106,8 thous. of live births and 109,2 thous. of the deaths. As of December 31, 2013 number of inhabitants of Czech Republic made up 10 512 thous.

Growth of GDP in constant prices detected decrease by 0,7 % (in current prices there was increase by 0,9 %) in Czech Republic in 2013. Economy was affected mainly by persisting debt crisis in Eurozone and restrictive fiscal policy. Income situation of households has been worsened (current incomes have decreased), tension on labour market has been intensified, investment activity has remained weak, growth of foreign demand was minimal. With regard to reduced demand of households the inflation rate made up 1,4 % in 2013 (the lowest rate in last four years). Final consumption slightly increased in 2013 (by 0,6 %) - after decrease in last two years - due to governmental sector (by 2,1 %), consumption of households stagnated (growth only by 0,1 %).

From the point of view of unemployment development the situation in 2013 was affected by ongoing economic recession. Unemployment was on the annual increase during first half of the year, in the second half-year its growth slowed down. Annually rate of unemployed persons gradually decreased in 1st half-year of 2013 (after usual growth at the turn of the year) to 7,3 % as of June 30, 2013 (i.e. annually higher by 0,9 percentage point). Starting 2nd half-year the rate started to increase up to 8,2 % as of December 31, 2013. As of June 30, 2013, there were 540,5 thous. registered job seekers (i.e. annually higher by 65,9 thous.), at the end of 2013 its number made up 596,8 thous. (i.e. annually higher by 51,5 thous.). Average number of job seekers reached 564,4 thous. in 2013 (it represents annual increase by 60,0 thous.).

* Share of unemployed persons, i.e. the number of available job seekers aged 15 - 64 to the population of the same age, starting to replace the registered unemployment rate in January 2013.

2. Pension Insurance

Pension system of the CR is based on basic mandatory pension insurance according to the Act No. 155/1955 Coll., on pension insurance (first pillar) and on supplementary pension savings according to the Act No. 427/2011 Coll., on supplementary pension savings, which has substituted supplementary pension insurance with state contribution according to the Act No. 42/1994 Coll. (third pillar), and from 2013 on voluntary pension savings according to the Act No. 426/2011 Coll., on pension saving (second pillar).

The system of basic pension insurance is based on mandatory involvement and on a running basis (pay-as-you-go = PAYGO). The scheme is universal and secures all economically active persons; its funding is based on solidarity amongst generations. The regulation is unified for all insured persons except some administrative and organizational variations in cases when bodies of social security of departments of defense, interior and justice are responsible for decision-making.

The following pension benefits are provided under pension insurance: old-age pension, disability pension, widow's pension, widower's pension and orphan's pension. A pension is composed of two elements: a basic amount (stipulated by universal fix amount identical for all pensioners) and the percentage-base assessment based on the insured period and earnings achieved. Czech Social Security Administration and relevant authorities of social welfare of Ministry of Defence, Ministry of Interior and Ministry of Justice take decision on claim, amount and payment of pension.

After passage of Pension Insurance Act in 1995 number of legislative changes has been adopted. For example adjustments effective since 2004, when increase in the retirement age after 2007 has been approved. Furthermore, early retirement was limited by cancellation of temporarily reduced pension (except for disability pensioners), crediting of studies for the purposes of pension insurance has been reduced as well as cancelling the condition enabling entitlement to the payment of old-age pensions concurrently with income from gainful activities. Rate of premium for pension insurance was increased by two percentage points (from 26% to 28% of the assessment base) and at the same time the rate of contribution to the state employment policy decreased by two percentage points (from 3,6% to 1,6% of the assessment base). Gradual increase in the minimum assessment base for setting premiums for the self-employed in 2004-2006 has been also adopted.

In 2006 there were changes in the partial disability pensions and widow's pensions paid in concurrence with another pension. Payment of partial disability pensions, which had not been paid or reduced due to income from gainful activities, has been paid in full amount since February 2006. Amount of widow pension for widows who became entitled to this pension before 1 January 1996 (and their widow pension was limited due to exceeding of stipulated amount) has been adjusted since July 2006. With regard to adoption of the Act No. 108/2006 Coll., On Social Services, which introduced a new benefit - care allowance, increase of pension for helplessness has been abolished since 2007.

The legal regulation adopted in 2008 (the Act No. 306/2008 Coll.), which has become effective in principle since January 1, 2010, implemented the first phase of pension reform with intention to improve financial sustainability and long-term stability of basic pension insurance. The most significant changes include:

- gradual extension of the insurance period required for entitlement to old-age pension from 25 years to 35 years including non-contributory periods of insurance or to 30 years without non-contributory periods of insurance,
- gradual limitation on crediting of non-contributory insurance periods also for entitlement to the old-age pension to 80% except period of personal care for a child under age of 4 years

- or for a person dependent on care of other person or due to former basic military service,
- uninterrupted continuation in gradual increases in the retirement age to 65 years for men and women who have not brought up any child or one child and to 62 - 64 years for women (by the number of the brought up children), if they have brought up at least two children,
- gradual extension of the period for the early retirement from three to five years,
- cancellation of condition for entitlement to old-age pension in addition to income from gainful employment, which consisted in negotiation the employment relationship for a maximum period of one year,
- increase of percentage amount of old-age pension for the period of employment after becoming entitled to old-age pension from the concurrent receipt of this pension,
- the change of a full disability pension to old-age pension in the same amount at the age of 65 years,
- unification of the existing fixed age limit for the "permanent" entitlement of women to men and to a widower's pension at the age of 4 years below the retirement age for men the same birth date,
- new definition of disability (introduction of three-degree) with "permanent" protection of existing amounts of partial disability pensions in case of change from II. degree of disability to I. degree,
- unification of the age limit, to which the so-called imputed amount of time for the percentage amount of disability pension for men and women (for men and women of retirement age set for women of the same birth date, which did not bring up any child),
- cancellation of the duration of studies acquired in the period after the Act was enacted as non-contributory period, except for assessment of entitlement to disability pensions,
- increase of reduction of the percentage-based assessment in case of early retirement from 0,9% to 1,5% of calculation base (from the 721st calendar days for every - as well as initiated - 90 calendar days).

Change of the Pension Insurance Act adopted in 2011 (the Act No. 220/2011 Coll.) reacted to the relevant judgment of the Constitutional Court, that legislation of determining the calculation base (from which the percentage-based assessment of pensions is calculated, along with the determination of the reduction limits) does not ensure (with other parameters of pension system construction) constitutionally guaranteed right to adequate material security and induce unacceptable inequalities between different groups of persons insured. Judgment of the Constitutional Court made possible to adjust reduction limits and to adopt another measures for increasing the principle of equivalence (merit) in basic pension system generally. The amendment of the Pension Insurance Act therefore includes other measures that improve financial sustainability of the basic pension insurance.

Among the most significant changes belongs:

- determination of the basic amount of pension, basic amount of pensions is always set as 9% of the average wage,
- determination of the amount of reduction limits and credit of amounts of the personal assessment base for determination of the calculation base. The Act clearly regulates rules for determination of reduction limits - in relation to the average wage - depending on the amount of reduction limits of the percentage for determining the amounts to be credited to level of calculation base from the personal assessment base. This change will be implemented gradually over a five-year transition period,
- continuation of gradual extension of reference period for determination of the personal assessment base from the current target state of 30 years to lifelong period with the fact that incomes before 1986 are not taken into account. In many cases the reference period shall include period of the systematic preparation for future careers in form of study, when

insured persons usually do not reach any income. When calculating the pension the period of study is considered as excluded period and division of real income earned in reference period will not come to pass,

- continuation of increasing of the retirement age and acceleration of unification of the retirement age for men and women, the full unification of the retirement age will come up in 2041. For persons born in 1975 there will be single retirement age of 66 years and 8 months (this retirement age will be increased by 2 months for every year of birth after 1975),
- slower gradation of percentage rate for reducing the amount of the percentage-based assessment of early retirement - in case of pensions granted after December 31, 2011, the percentage-based assessment will be reduced for every (as well as initiated) 90 calendar days in period from 361st to 720th days by 1,2% of calculation base (compared to current 0,9% of the assessment base),
- cancellation of a lump sum payment at termination of entitlement to widow's, respectively widower's pension due to enter to new marriage for entitlements after December 31, 2011,
- reducing the period (from five to two years for entitlements after December 31, 2011) for repeated establishment of entitlement to widow's or widower's pension, if conditions stipulated by law are met again,
- determination of way of paid pensions increase exclusively in accordance with the legal procedures and according to statistically identified growth of consumer price index and one-third of real wage growth.

Under Pension Insurance Act, paid out pensions are as of 2003 increased regularly in January of each year, whereas the minimum prescribed increase provided for under law reflects a 100% growth in prices and a 1/3 growth in real wages. Since 2008 (the Act No. 178/2008 Coll.) the Act has newly provided for the condition for raising the pensions in an extraordinary term already if prices increase by at least 5% (previously, this provision applied only if prices increased by at least 10%). At the same time, the Act stipulated that in 2008 pensions would be increased, apart from the regular term, from the pension benefit payment due in August 2008. It means pension benefits were increased two times in 2008. To raise pensions since January 2010 (in regular term) minimal increase stipulated according to law made up 0,9% - condition of 2% for compulsory valorization was not met - and the Government decided (with regard to its economic measures) not to raise pensions since January 2010. Pensions paid were increased since January 2011. By the Act No. 314/2012 Coll., temporary reduction of valorization for 2013 - 2015 was passed to decrease the growth of expenditure on pensions (increase of pensions was set according one third of the growth of prices and one third of the growth of real wage).

Voluntary pension schemes (second and third pillar) are regulated as individual savings systems in private pension companies based on capital funding.

Participants of voluntary pension savings system pay contribution to private pension company, which is 5% of the assessment base for contribution on pension insurance. At the same time contribution rate on basic pension insurance is reduced by 3% of the assessment base. The percentage amount of old-age pension amounts to 1,2% of the calculation base for each whole year of that part of the insurance period credited to the beneficiary.

Participants of supplementary pension savings (originally as supplementary pension insurance with state contribution) may receive state contribution depending on amount of participant contribution. Their entitlements from basic pension insurance system are not involved due to their participation. Amount of payments from this system have insignificant share in receipts of pensioners so far.

Notes: 1) Old-age pension granted after reaching the retirement age.

2) Old-age pension granted after reaching 65 years of age.

3) Full disability pensions (until 2009). Do not include pensions remitted abroad.

4) Partial disability pension until 2009.

Only "solo" widow's, widower's and orphan's pension are listed (i.e. not those paid concurrently with other pension - old-age disability, partial disability).

Proportional old-age pension = old-age pension granted pursuant to § 26 of the Act. No. 100/1988 Coll. and pursuant to § 29 paragraph b) of the Act. No. 155/1995 Coll. (a short insurance period).

Permanently reduced = up to 3 years prior to reaching the regular retirement age, according to § 31 of the Act No. 155/1995 Coll.

Temporarily reduced = up to 2 years prior to reaching the regular retirement age, according to § 30 of the Act No. 155/1995 Coll.

Non-reduced = old-age pension upon reaching the retirement age.

Notes:

Old-system pensioners = pensions granted before January 1996.

New-system pensioners = pensions granted after December 1995.

3. Sickness Insurance

The sickness insurance system is intended for people in remunerative work, for whom it provides security through financial sickness insurance benefits in cases temporary inability to work due to an illness, injury or quarantine, caring for a family member, pregnancy and maternity or caring for a child.

Since January 1, 2009, sickness insurance has been regulated through the Act No. 187/2006 Coll., on Sickness Insurance, as amended. This Act represents unification of sickness insurance legislation for employees, self-employed people and groups of persons, whose participation in the sickness insurance had been regulated by specific legislation. Sickness insurance is administered by District Social Security Administration for all insured persons (except members of armed forces, persons in custody and sentenced persons).

Contrary of self-employed people, whose participation in sickness insurance remains voluntary, employees participate on compulsory basis. An employee is subject to sickness insurance if he/she fulfils conditions stipulated by the Sickness Insurance Act: the performance of work in the Czech Republic, the scope of work specified by minimum number of days (the employment lasted or should have lasted at least 15 calendar days) and the minimum arranged income (so-called decisive income, its boundary was set at 2 000 CZK, it is increased according to the development of the average wage - for 2011 this boundary made up 2 000 CZK, for 2012 and 2013 the amount of 2 500 CZK).

There are four types of sickness insurance benefits in the Czech Republic: sickness benefit, care benefit, maternity benefit and pregnancy and maternity compensation benefit. The amount of these benefits is calculated from the employee's income level in the decisive period (usually a period of 12 calendar months preceding the calendar month in which the social event occurred). The calculation of the amount of a benefit is consequently based on daily average of these incomes (so-called daily assessment base), which is subject for further limitation.

New Act on Sickness Insurance has increased involvement of employers to their employee's incapacity for work in the connection with the provision of the salary compensation to an employee in the starting period of temporary incapacity for work or quarantine. In 2009 and 2010 (and starting 2014), sickness benefit was provided only from the 15th calendar day of temporary incapacity for work or quarantine (supported period lasted for a maximum of 380 calendar days beginning from the origin of temporary incapacity for work or order of quarantine, unless otherwise provided). From 2011 to 2013 (in connection with economic measures) sickness benefit belonged from 22nd calendar day of temporary incapacity for work. The salary compensation is provided by employers to their employees under sickness insurance up to a moment of entitlement to sickness benefit. The salary compensation is granted for working days - from the 4th working day of temporary incapacity for work or from the 1st working day in case of quarantine.

The obligation of employers to pay salary compensation to their employees was compensated by reduction of sickness insurance premium rate paid by employers (from 3.3 % to 2.3 %). Furthermore, in period of 2009 - 2010 employers were refunded by half of the salary compensation paid to their employees in the form of a deduction from the paid premium.

¹⁾ Average wage = average assessment base stipulated by relevant government decree.

²⁾ Average daily wage = average gross wage / average number of days per month.

³⁾ Until 1996 recorded as expenditures on sickness benefit / number of calendar days of incapacity for work based on CZSO data (for 1985 - 1992 there was conversion of working to calendar days), since 1997 as expenditures on sickness benefit / number of reimbursed days according to CSSA data.

4. Benefits of State Social Support and Foster Care

The system of State Social Support (regulated by the Act No. 117/1995 Coll., on the State Social Support, as amended) guarantees direct assistance especially for families with dependent children in specific social situations when this family cannot resolve these situations with their own forces and financial means. These situations include for example insufficient income, care for a new-born or small child, incompleteness of family etc. The system also financially contributes to families and individuals with low incomes to cover costs on housing. Foster care benefits (regulated by the above mentioned act till 2012) have been contained in the Act No. 359/1999 Coll., on the Social and Legal Protection of Children, as amended. Foster care is provided to a child by registered person who can provide temporary foster care or by person taking care of a child (foster carer or guardian).

Persons - Czech citizens and foreigners - have a right to benefits if they and the family/household members assessed jointly with them are registered as permanently resident in the Czech Republic and have their residence here. For non-EU foreign nationals, the registration as permanently resident in the Czech Republic is considered to be the period once 365 days have passed since the date they registered to stay in the Czech Republic. The Act on State Social Support stipulates other persons eligible for state social support benefits, if they have their residence in the Czech Republic. In the range of persons covered, there are also EU nationals who are subject of directly applicable legislation of the EU.

When entitlement for a benefit is assessed, property of family is not tested. Only family income was subject of testing in case of following benefits in 2013: child allowance, housing allowance and birth grant. Parental allowance, foster care benefits and funeral grant were provided without regard to family income. Income decisive for entitlement to state social support benefits includes, in particular, income from employment-related activity, income from entrepreneurship or other self-employment activity, sickness and pension scheme benefits, unemployment benefit, including similar income from abroad. Benefits are not subject of taxation.

The basis for determination of family income level when the entitlement to an income-tested benefit is assessed (as well as the amount of a benefit) is the living minimum. The living minimum represents the socially accepted minimum level of cash income that guarantees nutrition and other basic personal needs.

Applications for state social support benefits are handled by Labour Office of Czech Republic - regional branches and the branch for capital Prague, respectively their contact points according to permanent residence of the person entitled to the benefit.

In connection with stabilisation of public budgets, there were significant amendments of construction of most State Social Support benefits. Other legal changes came into force starting 2011 with regard to need of economic measures in authority of MoLSA: the term for election of variation of draw-down was shortened by parental allowance (by 4 years draw-down the lower amount of benefit was provided since 10th month - instead of original 22nd month - of child's age), entitlement to allowance was restricted only to families with a handicapped member and birth grant was newly paid on first-born child if family income in the calendar quarter prior to the birth does not exceed 2.4 times the family's living minimum.

Another significant changes in system of State Social Support benefits came into force in 2012 under the Social reform: social allowance was cancelled and entitlement to parental allowance has been newly regulated (parents may flexibly elect period of its drawing and its amount according to social situation of family; parental allowance is provided until the total amount of 220 thous. CZK is drawn, maximally up to 4 years of child's age; choice of the amount of parental allowance can be changed once in 3 month). Since 2013 there have been changes of legislation of foster care benefits: increase of amounts of foster carer remuneration and contribution to cover the child's needs, introduction of benefit upon the termination of foster care and extension of entitlement to contribution for the purchase of motor vehicle

5. Benefits of Assistance in Material Need, Benefits for People with Disabilities and Care Allowance

Administration of benefits of assistance in material need, benefits for people with disabilities and care allowance had been ensured (except state social support) by the relevant municipal authorities to the end of 2011. In the context of social reform these systems were transferred to Labour Office of the CR as of January 1, 2012.

Starting January 1, 2007, the Act No. 111/2006 Coll., on Assistance in Material Need, as amended, came into effect. It has regulated conditions for providing assistance when ensuring basic living requirements (situations connected with insufficient level of nutrition, housing and extraordinary events). Material need is the state when a person or a family does not have enough income and their overall social and property relations prevent them from enjoying what society accepts to be basic living requirements. At the same time, these persons are objectively unable to increase their income (through one's own work, through application of entitlements and claims or through the sale or other disposal of one's own assets), thereby improving their situation through their own actions. The main purpose of the system of assistance in material needs is motivation to active effort to secure resources to meet basic living requirements and to prevent social exclusion.

Under the system of material need there are following benefits:

1. *Allowance for living* - this benefit covers cases of material need that tackles the insufficient income of a person or family. Beneficiaries are entitled to an allowance for living if the income of these persons or families is less than the amount of living subsistence when reasonable housing costs have been deducted. The amount of living is established on a case-by-case basis based on an evaluation of the person's income, efforts and opportunities.
2. *Supplement of housing* - tackles cases where the income of a person or family, including the entitlement to a housing allowance from the system of state social support, is insufficient to cover justified housing costs.
3. *Extraordinary immediate assistance* - is provided to persons (with low income) who find themselves in situations that have to be resolved immediately: suffer from a serious threat to health, serious extraordinary event (a natural disaster, ecological disaster, etc.), risk of social exclusion (for example, homecoming from prison or facility), lack of resources to cover one-off expenditure or to acquire or repair basic furniture or durables, and to cover justified costs relating to the education or special interests of dependent children.

The Act No. 108/2006 Coll., Social Services Act (effective since January 1, 2007) introduced essential innovation in the area of social benefits - care allowance. The care allowance shall be provided to persons dependent on another physical person's assistance for the purposes of arranging for necessary assistance. A person can reimburse (within this allowance) professional social service or cover costs on securing assistance within its family.

Social assistance benefits for people with disabilities tackles unfavorable level of living of these persons by providing means for their need related to housing, transport and provision of special compensatory aids. Until the end of 2011, social assistance benefits for severely handicapped people had been provided in accordance with Decree of Ministry of Labour and Social Affairs No. 182/1991 Coll., through which are applied the Act on Social Welfare and the Act on the Operation of Bodies of the Czech Republic in Social Welfare, as amended. Since 2012 this area has been regulated by the Act No. 329/2011 Coll., on Provision of benefits to People with Disabilities and on Amendment to Related Acts. Through this act former broad number of types of benefits has been substituted by mobility allowance (periodic benefit for people who are not able to manage basic living needs in the area of mobility or orientation and these ones are periodically transported or transport themselves in calendar month) and allowance to special aid (one-off benefit for acquisition of a special aid to people with disabilities for self-care or realization of employment, preparation for further employment, acquiring of information, education or for contact with surroundings).

Development of Expenditures on Benefits of Assistance in Material Need, Benefits for People with Disabilities and Care Allowance

6. Social Services

Main importance of social services is to mediate assistance in the care of one's own person, providing meals, accommodation, assistance in running a household, care and assistance with bringing up a child, counselling, mediation of contact with social environments, psychotherapy and social therapy and assistance in assuring one's rights and interests. From the point of view of social services users it covers mainly development, or at least maintenance, of the existing self-sufficiency, return into user's own home environment, renewal or maintenance of original lifestyle, development of user's abilities and opportunity for leading an independent life and limitation of social and health risks associated with the users' lifestyle.

The Act No. 108/2006 Coll., Social Services Act, as amended (effective since January 1, 2007), has brought significant changes in the system of social services. This Act aims to secure assistance to people in unfavourable social situation through newly defined spectrum of social services. The assistance is intended as activities necessary for social inclusion and for dignified living conditions appropriate with level of society development. Provision of assistance is based on:

- availability - with respect to type of assistance, regional availability, access to information and economic availability,
- efficiency - social service has to be convenient for needs of human not for the system needs,
- quality - way and scope of provision of social service correspond to current knowledge and capacity of society,
- safety - provision shall not limit rights and interests of persons,
- economy - public and private expenditures on assistance provision shall maximally cover objective scope of needs.

Persons in unfavorable social situation that require assistance to be self-sufficient are entitled to individual benefit - care allowance (for more see the previous chapter). Its amount corresponds to scope of needs. Care allowances are provided to all entitled persons without regard to form the service is provided (either through natural sources, especially family or through social service providers).

The Act also regulated significant innovation concerning an authorization for social services provision. The introduction of the register of social services providers (<http://iregistr.mpsv.cz>) is basic precondition for obtaining an overview on scope and character of social services net. Registration of social service providers represents important prerequisite for provision of social service and for subsidizing of financial means from public budgets.

On the basis of the Act, the conditions for "safe, quality and effective" provision of social services have been stipulated with an objective to secure protection of persons with reduced capability to assure their rights and interests. These conditions form series of obligations for social services providers and the system of control. Beside the standard control procedure, there is also the system of supervision on quality of social services (introduced by the Act) through inspection of quality of social services based on expert assessment of conditions and procedures of the social services providing. The Act launched conditions of professional skills for performing a profession of social workers.

Henceforth, the state regulates conditions for provision of social services, but does not provide these services except 5 facilities under administration of the MoLSA. The position of the state as a former majority social services provider terminated alongside with abolition of district offices. The state supports regional and local self-administration to assess set of needs of its population for formation of available net of social services.

7. Incomes of Households

The most significant part of current household incomes, as evident from quantity indicators of the national accounts statistics (CZSO), represents compensations paid to employees, especially wages and salaries (basic wages and salaries, bonus and remunerations, compensation money, natural wages not included in basic wage like for example the value of products and services offered to employees free or with discount, the value of uniforms and meal tickets, contributions on holiday, culture, sport etc.). The ratio of wages and salaries (in this conception) on compensation of employees has stagnated during last 10 years (level of 76%), their rate to current household incomes has fluctuated from 38% to 41% in this period.

Current household incomes made up 3 087,0 mld. CZK in 2013. Compared to 2012, they had declined nominally by 0,6% (by 17.2 mld. CZK) and declined really by 2,0%. The next items included in the current household incomes represent social benefits and mixed pension (ratio of nearly 20%), pensions from property and so-called other current transfers (compensations from non-life insurance, wins from bets, lotteries etc.) with ca 5% ratio.

The average monthly gross wage is another indicator for evaluation of development of household living situation. This indicator is based on ratio of wages excl. other personal costs related to one employee of registered number per month (before reduction by premiums on general health insurance and social security, payments of income tax and other statutory deductions eventually). In last 13 years the annual dynamics of this wage has fluctuated in interval from 0,0% to 8,8%, in real expression (i.e. reduced by growth of consumer prices) from -1,4% to +6,1%.

Average monthly nominal wage (per number of employees - full-time equivalent) in the national economy made up 25 078 CZK in 2013 stagnated - in 2012 it had annually increased by 2,5% (by 612 CZK). In the business sphere (its employees made up nearly 82% within all reported subjects) the average monthly nominal wage amounted to 25 038 CZK after annual decline by 0,2% (by 40 CZK). The average salary in non-business sector increased by 1,0% (by 240 CZK) to 25 254 CZK.

From the point of view of social transfers to households, it may be stated, that ratio of social incomes in the structure of total social incomes of households reached 18,8% in 2013 and annually exceeded this ratio by 0,4 percentage point. Total amount of social incomes of households amounted to 470,1 mld. CZK, it has represented growth by 1,8% (by 8,3 mld. CZK) compared to 2012. The most significant item (78,9%) of social transfers was represented by pension insurance benefits (371,1 mld. CZK), i.e. annual growth by 0,1% (by 0,5 mld. CZK).

¹⁾ including supplementary insurance, settlement of pension from Slovakia, increase of pensions for helplessness and compensation like rehabilitation and (pensions and benefits paid abroad are not included); advance payment for post office from previous years are not included,

²⁾ without armed forces and benefits paid abroad,

³⁾ without transfers to deposit accounts, drawbacks for defunct benefits and transfers of overpayments from previous years transferred to state budget,

* incl. social assistance benefits paid out according to the previous legislation

8. Basic Information on Labour Market

In 2013 the average number of registered job seekers annually increased by 60 thous. to 564,4 thous., on the contrary the average number of vacancies (39 thous.) declined by 0,9 thous. For this reason, there was increase of average number of job seekers per 1 job vacancy from 12,6 in 2012 to 14,5 in 2013. The average number of job seekers with unemployment benefit increased from 104,5 thous. to 117,9 thous. persons (its share in total number of job seekers increased annually from 20,7% to 20,9%). The average share of unemployed person (share of available job seekers in age 15 to 64 years to the population of the same age, this indicator replaced the registered unemployment rate) reached 7,7%, compared with 2012 it was higher by 0,9 percentage points.

The data for the whole year 2013, as well as for the end of 2013, when the number of job seekers reached 596,8 thous. (in December 2012 - 545,3 thous.) and the share of unemployed persons made up 8,2% (in December 2012 - 7,4%), were much worse in comparison with the previous year. However, in the second half of 2013, the annual differences of job seekers as well as the share of unemployed persons gradually decreased slightly.

Total number of registered job seekers was largely involved by people over 50 years of age (their share rose from 26,5% to 27,2%). The number of people under 25 year of age increased slightly, their share decreased from 18,1% to 16,8%. The permanent problem is placing of candidates with low level of education. The largest group of job seekers was persons with apprenticeship certificate (40,4%) and persons with incomplete or with primary education (27,5 %). The number of the long-term unemployed (unemployed for more than 12 months) increased from 192,2 thous. (at the end of 2012) to 237,0 thous. (as of December 31, 2013). Their share in total number of registered job seekers increased from 35,2% to 39,7%.

Average monthly amount of unemployment benefit increased annually from 5 892 CZK in 2012 to 6 284 CZK in 2013. This amount was affected by increase of number of job seekers receiving above-average benefit and decline of number of job seekers with the lowest amounts of the benefit.

Unemployment benefit expenditures made up 9,7 mil. CZK in 2013 and increased annually by 0,9 mld. CZK. This was mainly due to higher average of unemployment benefit and increase of number of newly registered job seekers (total of 614,5 thous. persons in 2013, i.e. annual increase by 25,1 thous.), it resulted in higher share of job seekers with unemployment benefit.

The expenditure on Active Employment Policy from the State budget and from the European Social Fund made up 4,3 mld. CZK in 2013. Compared to 2012, these expenditures increased by 1,7 mld. CZK, mainly due financial resources of the European Social Fund.

Within the framework of state employment policy it was spent 3,7 mld. CZK for benefit to employers which employed at least 50% of disabled employees (§ 78 of the Act No. 435/2004 Coll., Employment Act) and 0,33 mld. CZK on payments of wage claims to employees in case of employer's insolvency.

According to Labour Force Survey of CZSO in 2013, there was growth of employment in all sectors of national economy to total of 4 937,1 thous. persons (i.e. annual increase by 47,0 thous. persons, i.e. by 1,0%). The increase of employment and parallel growth of unemployment was associated mainly with increase of persons with part-time work.

1) ensuring of occupational experience for graduates and the acquisition for young workers is not regulated by the Act No. 435/2004 Coll., Employment Act, as amended, i.e. new workplaces are not established, expenditures of labour offices (after 2004) resulted from agreement concluded prior to the date this Act came into force

2) benefit to self-employed persons with disability for establishment of protected workplaces

3) according to § 120 for the Act No. 435/2004 Coll., Employment Act, as amended (including regionally targeted programmes for solution of unemployment and Programmes to support renovation or technical upgrade of tangible fixed assets which support the career prospects for the disabled)

4) including investment incentives and programmes to establish new workplaces

5) cost on information materials issued by Labour Office and Employment Services Administration, other support employment programmes, costs on employment active policy not specified, ESF projects until 2006

6) including capital and material costs inclusive of costs on salaries, other costs on done work and premium

*) including expenditures of MoLSA on services provided only by Gordic company to the Labour Office (expenditures of MoLSA associated with software and services for other supporter are not available)

**) only expenditures of Labour Office in 2012

9. European System of integrated Social Protection Statistics (ESSPROS)

The European System of integrated Social PROtection Statistics (ESSPROS) was developed by the Statistical Office of European communities (Eurostat) in cooperation with member states experts in the 70's of the last century. ESSPROS represents a significant instrument for mutual comparison of social protection level in the Member States. Since its introduction ESSPROS methodology has been amended in a little scope. For implementation of ESSPROS in the Czech Republic the agreement between CZSO and MoLSA on establishment of inter-departmental Working Group (led by the MoLSA) was made in 2000. For the Czech Republic time series of ESSPROS Core system for 1995-2012 (including qualitative database containing descriptions of social protection schemes and benefits) and module on number of pension beneficiaries for 2000-2012 (methodically in the definitely internationally comparable form since 2006) are available so far. New Eurostat methodology for net social protection benefits module was completed by the international Working Group, the methodology guarantees data comparability. Data for the Czech Republic on this module are available for period of 2007-2011.

ESSPROS is divided into the Core system that includes data on receipts and expenditures in the area of social protection and modules containing additional statistical information. All financial transactions under the ESSPROS should be based on accountancy. In cases when accountancy sources are not available, statistical and administrative sources as well as estimates can be used.

According to the ESSPROS Manual the conception of social protection is defined as all interventions from public or private bodies intended to relieve households and individuals of the burden of a defined set of risks or needs, provided that there is neither a simultaneous reciprocal, nor an individual arrangement involved. The list of risks or needs is defined on the basis of an agreement by eight functions of social protection:

1. Sickness/Health care
2. Disability
3. Old age
4. Survivors
5. Family/Children
6. Unemployment
7. Housing
8. Social exclusion, not elsewhere classified

The Core System includes only social protection provided in the form of cash payments, reimbursements and directly provided goods and services to protect households and individuals. Specific information necessary to perfect monitoring of the functions of the system are then ensured in individual modules.

The ESSPROS Core system defines and describes classification of social protection schemes. A social protection scheme is a distinct body of rules, supported by one or more institutional units, governing the provision of social protection benefits and their financing. Social protection schemes should at all times meet the condition that it must be possible to draw up a separate account of receipts and expenditures. Schemes are classified into categories according to following criterions:

- decision-making (public and private schemes),
- legal enforcement (compulsory and non-compulsory schemes),
- establishments of entitlements (contributory and non-contributory schemes),
- scope (universal, general and special schemes),
- level of protection (basic and supplementary schemes).

Receipts of social protection schemes in the ESSPROS Core system are classified by type (social contributions, general government contributions, transfers from other schemes and other receipts) and origin (institutional sector from which the payment is received). Expenditures of social protection schemes are also classified by type or reason for which are paid out.

The ESSPROS system identifies exact reasons for which benefit under given scheme and function is provided. It also defines social protection schemes with regard to national (member states and candidate countries) practices to cover all benefits with social protection dimension under above-mentioned classification. This is the only way how to ensure comparable statistics among countries reflecting their institutional differences in the system of social protection.

Expenditures on social protection of ESSPROS Core system according to social protection functions in the time series (1995 - 2012) are in the Table No. 9.1. More detailed data and international comparison of social protection level in the EU member states and other European countries according to the ESSPROS methodology are available on Eurostat web sites. This is the source for data in the Table No. 9.2 on relation of social protection expenditures to GDP in selected European countries.
